

PARR & CO

PARR EXCELLENCE

Engineering excellence since 1871

Engineering excellence is the cornerstone of Parr & Co

A STRONG HISTORY

Established in 1871, Parr & Co has earned a reputation for quality engineering services and supports a strong and diverse customer base in the South Canterbury region across the ever-growing primary and secondary manufacturing sector. Demand for our services is incredibly varied, and we have the capability to meet everything from small one-off jobs through to major projects and breakdowns.

OUR VALUES

- The health and safety of all our staff and clients comes first.
- Solution driven, always challenging our thinking to find new, better solutions.
- We deliver on our commitments and offer quality in everything we do.
- Future focused, with our customers' needs front of mind.

ACCREDITATIONS

- ISO 45001
- CPNZ
- Sitewise Gold

BASE CERTIFICATIONS

- ASME/ASNZ welding
- First aid
- Fire extinguisher
- Confined space
- Permit receiver
- Heights
- EWPs
- Forklift

Fabrication

1,100m² WORKSHOP

Our comprehensive fabrication and welding workshop handles a wide range of welded fabrications. With specialist welders and equipment available at all times, we take on difficult repair and refurbishment work as well as new fabrications.

CAPACITY

- 1 × 5 tonne gantry crane
- Cutting up to 2.4m long, 12mm thick
- Rolling up to 2.4m long, 12mm thick
- 100 tonne press & brake pressing
- 2 × 2 tonne gantry cranes
- Folding up to 3m long, 12mm thick
- Punching up to 35mm
- Radial arm drill

WELDING

- MIG
- Stainless
- Purge
- Certified stick welding
- TIG
- Aluminium
- Marine grade
- Certified ASME welding

Machine shop

400m² WORKSHOP

Our well-equipped machine shop is set up for large machining jobs. The experienced team handles a huge range of work, including drive line components such as prop shafts and couplings for fishing vessels, auger drives and stubs, shafts and parts for pumps, and all general machining.

- **Pre-breaker overhauls**
  A specialised service for the freezing and meat industries.
- **Steel shaft in stock**
  Medium and high tensile, cut to order.

Reverse engineering

In a world where equipment is quickly considered obsolete, replacement parts often become impossible to source. Our highly skilled engineers can replicate — and often improve on — original parts that are no longer available.

Our equipment

- Six manual lathes
- Taper turning and taper thread cutting
- Manual milling
- Horizontal line borer
- Vertical slotting machine with rotary table and 180mm stroke
- Hydraulic press up to 100 tonne
- Surface grinder
- Radial arm drill
- Bearing induction heater for precise mounting of ball and roller bearings

Preventative maintenance

Our preventative maintenance services keep your assets operating at peak performance. Through regular scheduled maintenance and inspections, we help minimise unplanned downtime, reduce the risk of costly equipment failures and extend the life of your plant and equipment.

Surveys and inspections

Our skilled engineers work predominantly off-site, serving the region's large and diverse primary and secondary manufacturers. For years we have provided some of the region's largest companies with boiler and other asset surveys, helping them make informed decisions on capital and preventative maintenance budgets.
